

120W Folding Solar PV Kit Instructions

Step 1: Remove complete kit from the case and un-clip latches.

Step 2: Fold out legs and place on flat ground.

Step 3: Face glass panels in the direction of the sun. During the day to gain maximum charging you will need to adjust the direction of the panels and adjust the elevation angle to best face the sun.

Step 4: Connect the red alligator clip to the red terminal on the battery (Positive). Connect the black alligator clip to the black terminal on the battery (Negative).

Step 5: Check battery status indicator It now should be illuminated if connected.

Charge Controller Indicators

Solar Panel Status Light Flashing	Battery is charging
Solar Panel Status Light Solid	Battery is not charging
Battery Status Light Solid	Battery is connected correctly
Battery Status No Light	Battery is not connected correctly

Operating Instructions

Charging of your battery is automatically controlled by the charge controller. When the battery voltage is low the controller will increase the current output and when the battery is above 90% capacity the controller will decrease the charging current. You can run small 12v lighting off the load connection or charge USB devices from the USB socket just simply press the mode to turn on/off.
